

Git + Vercel PowerShell Cheatsheet

1. Initialize Git

```
git init
git remote add origin https://github.com/YourUsername/your-repo.git
git branch -M main
```

2. Stage and Commit Changes

```
git add .
git commit -m "Your commit message"
```

3. Push to GitHub

```
git push origin main
```

4. Vercel Deployment

After pushing to GitHub, Vercel (if connected to the GitHub repo) will auto-detect changes on the main branch and deploy your app.

To connect a repo:

1. Go to <https://vercel.com/dashboard>
2. Click "Add New Project"
3. Import your GitHub repo
4. Configure build settings if needed
5. Deploy

5. Helpful Commands

```
git status          # Check working tree status
git log --oneline   # View commit history
git restore <file> # Discard local changes
```
